Q&A

1. Sleep data is not accurate enough

A. Sleep monitoring simulates people's natural sleep and wake up time, so it needs to be worn normally

B. If you wear it too late or when you fall asleep, errors may occur

C. sleep data is not monitored during the daytime, the default sleep monitoring period is 21:30 to 12:00 the next day

2. BT is not connected or cannot be connected

A. Restart the watch and reconnect

B. Please try to restart the mobile phone PT and connect again

C. Do not connect the mobile phone to other BT devices at the same time. Try to connect the mobile phone again after untying
other devices.

3. Inaccurate measurement of heart rate/
blood oxygen

A. Generally, when measuring, it is caused by poor contact between watch sensor and wrist

B. Please pay attention to the full contact between the sensor and the wrist during measurement

C. For people with darker skin and hairy arms, please go to the App to open[Devices-Enhanced measurement]"

4. For more questions, please check the App[ME-FAQ].

Maximum EIRP value: 1,47dBm
